

Hand-Held Shower

Model #: _____
Serial #: _____
Date: _____

Provider Name: _____
Phone #: _____
Contact Person: _____

Setting up your equipment:

- If you use a shower chair, be sure the shower hose is long enough for use while seated in your chair.
- Follow manufacturer instructions to affix hand-held showerhead onto your existing shower arm.
- A diverter valve is included which controls where flow of water is directed – either through the hand-held showerhead or the faucet. You will choose the set-up at installation to suit your faucet fixtures.

Using your equipment:

- Use control dial located on the showerhead to adjust water pressure.
- After use, secure hand-held shower onto the shower arm.
- Keep hose free of knots and kinks that would disrupt water flow.

Maintenance:

- Clean your hand-held shower with a disinfecting household cleaner as needed.
- The same cleaners used in the tub are appropriate.
- If a leak should occur and persist, call a plumber.

Safety Issues:

- Keep the hose free of knots, which could shorten the length of the hose and cause the user to trip or become entangled.
- If the shower is shared with those who stand to wash, courtesy suggests moving the diverter valve to the faucet position to prevent unexpected sprays from the hand-held showerhead.

Please contact your equipment provider for any questions, adjustments, or repairs.

All Medicare DMEPOS suppliers must be in compliance with CMS Supplier Standards in order to obtain and retain their billing privileges. These standards, in their entirety, are listed in 42 C.F.R. pt. 424, sec 424.57(c). A supplier must disclose these standards to all customers/patients who are Medicare beneficiaries (standard 16). Supplier Standard 12 includes "A supplier ...must instruct beneficiaries on use of Medicare covered items".
